

Independent Container Line has established the following plan to ensure that our service standards are maintained in the event of a Pandemic attack;

- ICL operating system allows for remote functions so that we can provide commercial services from different locations to supplement any affected office.
- Procedure has been established to forewarn vessels of infection level at ports of call before docking.
- Medication has been provided to all ICL vessels to be used by essential crew members.
- N95 type masks have been provided to protect vessel crew from infection on ship or when in contact with land based personnel.
- ICL sponsors and encourages vaccinations for its employees against Flu and has ensured sources of medication in the event that vaccines are not available at the time of infection at any location.
- N95 type masks have been provided to those landside locations where ICL personnel is in contact with possible sources of infection.
- If an ICL employee is suspected of contact or exposure to an infected person they will be asked to go to Doctor to be checked for infection or to stay at home until incubation period passes and no symptoms have surfaced.
- Any infected ICL employees will be asked to stay home until infection transmission period subsides.
- Critical ICL vendors have provided responses as to their plans to continue to provide uninterrupted service in case of a Pandemic attack based on a 50% Clinical Attack rate.
- Transport options, diversions and relays for areas that have been identified as possible “bottlenecks” are being evaluated.
- No rail transport will be performed in the U.S. during a Pandemic attack.
- Alternate Ports of call have been evaluated where logistically and commercially possible (ICL at this time does not have any restrictions on port calls in the U.S. regarding of Labor affiliation at any port).
